

PART 1 IMPROVEMENTS

WEBSITE FEATURES AND FUNCTIONALITY

HOME PAGE:

Logo and name:

Figure 1: Mimi women. [s.a.]. Mimi women website logo.

Slogan – “Breaking taboos to empower women”.

Brief history and about the founder of mimi women.

Call to action buttons

ABOUT US PAGE

- Organisation history
- Founder of mimi women
- Mission and vision of mimi women

DESIRED FUNCTIONALITY

- **Website is easy to navigate** - users can easily navigate and move through the website and find the information they need without confusion or difficulty. The website has clear structure, organised menus, properly labelled pages, and simple pathways that guide users from one section to another.
- **Able to respond quickly** – webpages can load fast and provide quick responses to user actions and enquiries. When users click buttons, submit or search for information or open pages.
- **Secure payment safety** – a secure payment system allows visitors to donate money safely through the website. Users can use multiple payment methods and

payment tracking systems. The system ensures that payment information such as bank details, passwords and personal data cannot be stolen or hacked into.

- **Mobile responsiveness** – the website can automatically adjust and display properly on different screen sizes such as smartphones, tablets, laptops and desktop computers. Users can comfortably view content without zooming in or struggling to navigate.
- **Search functionality** – as the website grows and contains more information, users need a fast way to locate content, it saves users time, improves website usability, helps visitors quickly find programmes, events or contact details.
- **Social media integration** - creates a stronger online presence and improves communication, encourages audience engagement, helps promote events quickly and drives traffic between the website and social media pages.

FOR ALL WEB PAGES (CHANGES)

- I changed the design and user experience colors and removed red as it was disturbing the website's aesthetic.
- I removed all the horizontal lines on all webpages as it was disturbing the CSS styling.
- I removed all slashes before the words on the navigation
